FAQs

What fabrics can be treated by NeverWet Products?

Rust-Oleum NeverWet Fabric Water Repelling Treatments work best on, polyester, cotton, poly/cotton blends, canvas, leather and suede. Test the product in an inconspicuous area before treating the entire surface.

Do Rust-Oleum NeverWet Fabric Products dry clear?

Yes, the Rust-Oleum NeverWet Fabric Water Repelling Treatments dry crystal clear. NeverWet Fabric products do not change the appearance or feel of the treated item.

How do Rust-Oleum NeverWet Fabric Water Repelling Treatments work?

The NeverWet Fabric Water Repelling Treatments penetrate the surface to form a superhydrophobic protective barrier around the fabric fibers. Treated items are protected from damage caused by water. Items treated with NeverWet Fabric formulas are completely breathable with no change in the original feel of the fabric.

How long will Rust-Oleum NeverWet Fabric Water Repelling Treatments last?

As with other waterproofers, NeverWet is a temporary treatment. Environmental conditions will affect the longevity of the Rust-Oleum NeverWet Fabric treatment. Abrasion is the leading cause of reduction in the treatment's life. NeverWet Fabric formulas can be reapplied as repellency begins to decrease.
