CONCRETE CLEAN & ETCH

Directions for Use:

1. Mix 1 quart (32 oz.) of concentrate with 3 quarts of water in a plastic sprinkling can. This will yield sufficient premix to cover 200 sq. ft. Hot water will accelerate cleaning and etching.
2. Sweep the surface to remove loose debris, and scrape off excess grease and oil.
3. Cleaning a 10' x 10' section at a time, dampen the surface with a fine spray of water, and using the sprinkling can, apply the premix evenly over the surface.
4. Scrub the premix into the surface with a stiff bristled broom until the foaming stops. NOTE: If no foaming occurs, surface has been previously sealed and this will prevent penetration of premix. Remove the sealer and reapply premix.
5. Triple rinse the surface with a water hose. Scrub while rinsing to ensure removal of all loosened material.
6. Allow the surface to dry thoroughly before applying stain or sealant.
7. After the surface has dried, check any glossy or oily areas by applying a few drops of water. If water does not penetrate quickly, re-etch the affected areas.
